## Subject: Obinutuzumab (Gazyva<sup>®</sup>) Injection

THIS MEDICAL COVERAGE GUIDELINE IS NOT AN AUTHORIZATION, CERTIFICATION, EXPLANATION OF BENEFITS, OR A GUARANTEE OF PAYMENT, NOR DOES IT SUBSTITUTE FOR OR CONSTITUTE MEDICAL ADVICE. ALL MEDICAL DECISIONS ARE SOLELY THE RESPONSIBILITY OF THE PATIENT AND PHYSICIAN. BENEFITS ARE DETERMINED BY THE GROUP CONTRACT, MEMBER BENEFIT BOOKLET, AND/OR INDIVIDUAL SUBSCRIBER CERTIFICATE IN EFFECT AT THE TIME SERVICES WERE RENDERED. THIS MEDICAL COVERAGE GUIDELINE APPLIES TO ALL LINES OF BUSINESS UNLESS OTHERWISE NOTED IN THE PROGRAM EXCEPTIONS SECTION.

### DESCRIPTION:

Chronic lymphocytic leukemia/small lymphocytic lymphoma (CLL/SLL) is a mature B-cell lymphoma and comprises approximately 7% of newly diagnosed cases of Non-Hodgkin's Lymphoma (NHL). CLL and SLL are different manifestation of the same disease and are managed in much the same way. The main difference is that in CLL the abnormal lymphocytes are found in bone marrow and blood, while in SLL they are predominately found in the lymph nodes and bone marrow. Treatment options have changed drastically in the last several decades; the introduction of immunotherapeutic agents such as monoclonal antibodies that target cell surface antigens (e.g., CD20, CD52) have led to the development of new and effective regimens that incorporate drugs with different mechanisms of action.

Obinutuzumab (Gazyva) is a humanized monoclonal antibody that binds specifically to the CD20 molecule located on pre B- and mature B-lymphocytes, resulting in cell lysis independent of BCL-2, which potentially circumvents resistance. Obinutuzumab was approved by the U.S. Food and Drug Administration (FDA) in October 2013 for the treatment of previously untreated chronic lymphocytic leukemia (CLL) in combination with chlorambucil. Gazyva was previously granted orphan designation for the treatment of CLL in February 2012. In February 2016, Gazyva was FDA approved for the treatment of follicular lymphoma in patients who relapsed after or are refractory to a rituximab-containing regimen, in combination with bendamustine followed by obinutuzumab monotherapy. In November 2017, the FDA-approved indication for follicular lymphoma was expanded to include, in combination with chemotherapy followed by obinutuzumab monotherapy in patients achieving at least a partial remission, the treatment of adult patients with previously untreated stage II bulky, III or IV follicular lymphoma. Gazyva was previously granted orphan designation for the treatment of follicular lymphoma in April 2015. While only listed in the labeling for ibrutinib (Imbruvica), in January 2019 ibrutinib's indication of CLL/SLL was expanded to include combination treatment with obinutuzumab based on the

positive results of the iLLUMINATE trial in treatment naïve patients and became the first non-chemotherapy combination regimen for this indication. Gazyva also has orphan designations, as sponsored by the innovator drug company, for the treatment of membranous nephropathy (June 2020) and for the treatment of childhood-onset idiopathic nephrotic syndrome (NS), defined as steroid dependent or frequently relapsing NS (November 2021).

Obinutuzumab’s safety and effectiveness in CLL leading to initial FDA-approval were evaluated in a 3-arm, open-label trial of patients (n=356; median age: 73 years; 76% with coexisting medical conditions; 68% with CrCl<30 mL/min) with previously untreated CD20+ CLL. Patients were randomly assigned to receive randomized to chlorambucil only, obinutuzumab plus chlorambucil, or rituximab plus chlorambucil. Obinutuzumab 1000 mg IV infusion was administered on days 1, 8, and 15 of the first 28-day cycle and on day 1 of cycles 2 to 6. Chlorambucil 0.5 mg/kg orally was administered on day 1 and day 15 of all six 28-day cycles. Rituximab IV infusion was administered on day 1 of each 28-day cycle with 375 mg/m<sup>2</sup> for cycle 1 and 500 mg/m<sup>2</sup> for cycles 2 to 6. At a median follow-up of 14.2 months, median PFS was significantly improved with obinutuzumab plus chlorambucil compared with chlorambucil alone (23 vs 11.1 months; HR: 0.16; 95% CI: 0.11-0.24; p<0.0001); there were also improvements in overall response rate (75.9% vs 32.1%), complete responses (27.8% vs 0.9%), and median duration of response (15.2 vs 3.5 months). Results for obinutuzumab plus chlorambucil compared with rituximab plus chlorambucil were not reported.

National Comprehensive Cancer Network (NCCN) Guidelines for CLL/SLL and B-cell Lymphomas list obinutuzumab as a treatment option in various first-line and second-line settings as monotherapy and in combination with other treatments. The guidelines also state that the use of an alternative anti-CD20 monoclonal antibody (e.g., obinutuzumab or ofatumumab) could be used for the treatment of B-cell lymphomas in patients with intolerance (including those experiencing severe hypersensitivity reactions requiring discontinuation of rituximab) as well as rare complications to rituximab (e.g., paraneoplastic pemphigus, Stevens-Johnson syndrome, lichenoid dermatitis, vesiculobullous dermatitis, toxic epidermal necrolysis) regardless of histology. The NCCN Guidelines for Hairy Cell Leukemia list obinutuzumab as useful in certain circumstances in combination with vemurafenib (Zelboraf) as initial therapy for patients with indications for treatment who are unable to tolerate purine analogs including frail patients and those with active infection.

## POSITION STATEMENT:

Initiation of obinutuzumab (Gazyva) **meets the definition of medical necessity** when used for any indication listed in Table 1, and all of the indication-specific and maximum-allowable dosage criteria are met

**Table 1**

Indication	Specific Criteria	Maximum Allowable Dosage
Chronic lymphocytic leukemia or small	<p><b>ANY</b> of the following (“1” to “5”):</p> <ol style="list-style-type: none"> <li>1. <b>ALL</b> of the following (“a”, “b”, and “c”):               <ol style="list-style-type: none"> <li>a. Use is intended for first-line treatment of previously untreated disease</li> </ol> </li> </ol>	In combination with either acalabrutinib, bendamustine, chlorambucil, or ibrutinib:

<p>lymphocytic lymphoma (CLL/SLL)</p>	<p>b. Member has the del (17p) mutation</p> <p>c. Obinutuzumab will be used in any of the following regimens:</p> <ol style="list-style-type: none"> <li>i. As monotherapy</li> <li>ii. In combination with venetoclax (Venclexta)</li> <li>iii. In combination with acalabrutinib (Calquence)</li> </ol> <p>2. <b>ALL</b> of the following (“a”, “b”, and “c”):</p> <ol style="list-style-type: none"> <li>a. Use is intended for first-line treatment of previously untreated disease</li> <li>b. Member does <b>NOT</b> have a del (17p) mutation</li> <li>c. Obinutuzumab will be used in any of the following regimens: <ol style="list-style-type: none"> <li>i. In combination with venetoclax (Venclexta)</li> <li>ii. Proteinuria greater than or equal to 3.5 g/day and no decrease greater than 50% after 6 months of therapy with an angiotensin converting enzyme inhibitor (ACEi) or angiotensin II receptor blocker (ARB)</li> <li>c. Proteinuria greater than 8 g/day for 6 months</li> </ol> </li> <li>2. Member has had an inadequate response to treatment with rituximab</li> </ol>	<p>Induction:</p> <ul style="list-style-type: none"> <li>• Cycle 1 (28-day cycles): 1,000 mg day 1; 1,000 mg day 8; and 1,000 mg day 15</li> <li>• Cycles 2 to 6: 1,000 mg every 4 weeks (day 1 of each cycle)</li> </ul> <p>Maintenance monotherapy (after cycle 6):</p> <ul style="list-style-type: none"> <li>• 1,000 mg every 8 weeks for 12 doses</li> </ul>

Pediatric idiopathic nephrotic syndrome  [orphan indication]	<b>BOTH</b> of the following (“1” and “2”): 1. Member’s disease is dependent on or refractory to corticosteroids 2. Member has had an inadequate response to treatment with rituximab	Induction: <ul style="list-style-type: none"> <li>• Cycle 1 (28-day cycles): 1,000 mg day 1; 1,000 mg day 8; and 1,000 mg day 15</li> <li>• Cycles 2 to 6: 1,000 mg every 4 weeks (day 1 of each cycle)</li> <li>• Maintenance monotherapy (after cycle 6): 1,000 mg every 8 weeks for 12 doses</li> </ul>
Other FDA-approved or NCCN supported diagnosis  [not previously listed above]	<b>EITHER</b> of the following is met (“1” or “2”): 1. Member is diagnosed with a condition that is consistent with an indication listed in the product’s FDA-approved prescribing information (or package insert) <b>AND</b> member meets any additional requirements listed in the “Indications and Usage” section of the FDA-approved prescribing information (or package insert) 2. Indication <b>AND</b> usage are recognized in NCCN Drugs and Biologics Compendium as a Category 1 or 2A recommendation	Maximum FDA-approved dose or NCCN recommend dose
<b>Approval duration:</b> 6 months (12 months if for treatment of either CLL/SLL in combination with venetoclax or DLBCL with histologic transformation from follicular lymphoma)		

The continuation of obinutuzumab (Gazyva) **meets the definition of medical necessity** when **ALL** of the following criteria are met (“1” to “5”):

1. Authorization or reauthorization for obinutuzumab has been previously approved by Florida Blue or another health plan in the past 2 years for the treatment of an indication listed in Table 1 (with the exceptions of CLL/SLL and hairy cell leukemia - see initiation criteria) or other FDA-approved or NCCN supported diagnosis, **OR** the member previously met **ALL** indication-specific initiation criteria [see initiation criteria for CLL/SLL treatment]
2. The member did **NOT** have disease progression during treatment with obinutuzumab
3. If used as consolidation or extended-dosing maintenance therapy, obinutuzumab is being used as single-agent treatment
4. Dosage does not exceed the following depending on the indication for use and treatment regimen:
  - a. DLBCL with histologic transformation from follicular lymphoma
    - 1,000 mg every 8 weeks

- b. Extranodal marginal zone lymphoma (EMZL) of non-gastric sites (noncutaneous), extranodal marginal zone lymphoma of the stomach, and splenic marginal zone lymphoma in combination with bendamustine or lenalidomide:
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - c. Follicular lymphoma in combination with bendamustine or lenalidomide:
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - d. Follicular lymphoma in combination with CHOP or CVP:
    - Cycles 2 to 8 (21-day cycles): 1,000 mg every 3 weeks
    - After cycle 8: 1,000 mg every 8 weeks
  - e. Membranous nephropathy
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - f. Nodal marginal zone lymphoma in combination with bendamustine or lenalidomide:
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - g. Nodal marginal zone lymphoma in combination with CHOP or CVP:
    - Cycles 2 to 8 (21-day cycles): 1,000 mg every 3 weeks
    - After cycle 8: 1,000 mg every 8 weeks
  - h. Pediatric idiopathic nephrotic syndrome
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - i. Rituximab-intolerance
    - Cycles 2 to 6 (28-day cycles): 1,000 mg every 4 weeks
    - After cycle 6: 1,000 mg every 8 weeks
  - j. Other FDA-approved or NCCN-supported diagnosis (not listed above) - maximum FDA-approved dose or NCCN recommend dose
5. Member has not received more than 12 maintenance doses (i.e., doses given after cycle 6 or 8) during their current line of therapy, unless longer dosing is supported in either the FDA-approved prescribing information or NCCN guidelines for the member's specific indication

**Approval duration:** 1 year

## DOSAGE/ADMINISTRATION:

**THIS INFORMATION IS PROVIDED FOR INFORMATIONAL PURPOSES ONLY AND SHOULD NOT BE USED AS A SOURCE FOR MAKING PRESCRIBING OR OTHER MEDICAL DETERMINATIONS. PROVIDERS SHOULD REFER TO THE MANUFACTURER'S FULL PRESCRIBING INFORMATION FOR DOSAGE GUIDELINES AND OTHER INFORMATION RELATED TO THIS MEDICATION BEFORE MAKING ANY CLINICAL DECISIONS REGARDING ITS USAGE.**

**FDA-approved:** indicated, in combination with chlorambucil, for the treatment of patients with previously untreated chronic lymphocytic leukemia (CLL). It is also indicated for: (1) in combination with bendamustine followed by obinutuzumab monotherapy, the treatment of patients with follicular lymphoma who relapsed after, or are refractory to, a rituximab-containing regimen, and (2) in combination with chemotherapy followed by obinutuzumab monotherapy in patients achieving at least a partial remission, the treatment of adult patients with previously untreated stage II bulky, III or IV follicular lymphoma.

Obinutuzumab should be administered as an intravenous (IV) infusion; do not administer as an IV push or bolus. Individuals should receive pre-medication (i.e., glucocorticoid, acetaminophen, and an antihistamine) prior to each obinutuzumab infusion. See the package insert for additional details on infusion rates and rate adjustments.

The recommended dosage for members with CLL/SLL is as follows (1 cycle = 28 days):

- 100 mg on day 1, Cycle 1
- 900 mg on day 2, Cycle 1
- 1,000 mg on day 8 and 15 of Cycle 1
- 1,000 mg on day 1 of Cycles 2 to 6

The recommended dosage for member with relapsed or refractory follicular lymphoma is as follows (1 cycle = 28 days):

- The first 6 cycles are given in combination with bendamustine
  - 1,000 mg on day 1, Cycle 1
  - 1,000 mg on day 8, Cycle 1
  - 1,000 mg on day 15, Cycle 1
  - 1,000 mg on day 1 of Cycles 2 to 6
- After cycle 6 obinutuzumab is given as monotherapy
  - 1,000 mg every 2 months for up to 2 years

The recommended dosage for member with previously untreated follicular lymphoma is as follows – see the product labeling for additional dosing details

- Six 28-day cycles if used in combination with bendamustine
- Six 21-day cycles if used in combination with CHOP, followed by 2 additional 21-day cycles of obinutuzumab alone
- Eight 21-day cycles if used in combination with CVP

**Dose Adjustments:** Monitor blood counts at regular intervals. Consider treatment interruption if infection, Grade 3 or 4 cytopenia, or Grade 2 or greater non-hematologic toxicity occurs.

**Drug Availability:** obinutuzumab is supplied as a 1,000 mg/40 mL single-use vial.

## PRECAUTIONS:

### Boxed Warning

- Hepatitis B virus (HBV) reactivation, in some cases resulting in fulminant hepatitis, hepatic failure and death, can occur in persons treated with anti-CD-20 antibodies such as obinutuzumab. Screen all patients for HBV infection before treatment initiation. Monitor HBV-positive patients during and after treatment. Discontinue obinutuzumab and concomitant medications in the event of HBV reactivation.
- Progressive Multifocal Leukoencephalopathy (PML) including fatal PML, can occur in patients receiving obinutuzumab.

### Contraindications:

- Patients with known hypersensitivity reactions (e.g., anaphylaxis) to obinutuzumab or to any of the excipients, or serum sickness with prior obinutuzumab use

### Precautions/Warnings

- See Boxed Warning
- **Infusion reactions:** Premedicate patients with glucocorticoid, acetaminophen and antihistamine. Monitor patients closely during infusions. Interrupt, reduce rate, or discontinue infusion for infusion-related reactions based on severity.
- **Hypersensitivity Reactions Including Serum Sickness:** Discontinue obinutuzumab permanently.
- **Tumor Lysis Syndrome:** Premedicate with anti-hyperuricemics and adequate hydration especially for patients with high tumor burden, high circulating lymphocyte count, or renal impairment. Correct electrolyte abnormalities, provide supportive care, and monitor renal function and fluid balance.
- **Infections:** Do not administer obinutuzumab to patients with an active infection. Patients with a history of recurring or chronic infections may be at increased risk of infection.
- **Neutropenia:** In patients with Grade 3 to 4 neutropenia, monitor laboratory tests until resolution and for infection. Consider dose delays and infection prophylaxis, as appropriate.
- **Thrombocytopenia:** Monitor for decreased platelet counts and bleeding. Transfusion may be necessary.
- **Disseminated Intravascular Coagulation (DIC):** Evaluate cause and monitor for bleeding, thrombosis, and need for supportive care.
- **Immunization:** Avoid administration of live virus vaccines during obinutuzumab treatment and until B-cell recovery.
- **Embryo-Fetal Toxicity:** Based on its mechanism of action and findings in animals, obinutuzumab can cause B-cell depletion in infants exposed to obinutuzumab in-utero. Advise pregnant women of the potential risk to a fetus. Advise females of reproductive potential to use effective contraception while receiving obinutuzumab and for 6 months after the last dose.

## BILLING/CODING INFORMATION:

The following codes may be used to describe:

### HCPCS Coding:

J9301	Injection, obinutuzumab, 10 mg
-------	--------------------------------

### ICD-10 Diagnosis Codes That Support Medical Necessity:

B20	Human immunodeficiency virus [HIV] disease
C82.00 – C82.09	Follicular lymphoma grade I
C82.10 – C82.19	Follicular lymphoma grade II
C82.20 – C82.29	Follicular lymphoma grade III, unspecified
C82.30 – C82.39	Follicular lymphoma grade IIIa
C82.40 – C82.49	Follicular lymphoma grade IIIb
C82.50 – C82.59	Diffuse follicle center lymphoma
C82.60 – C82.69	Cutaneous follicle center lymphoma
C82.80 – C82.89	Other types of follicular lymphoma
C82.90 – C82.99	Follicular lymphoma, unspecified
C83.00 – C83.09	Small cell B-cell lymphoma
C83.10 – C83.19	Mantle cell lymphoma
C83.30 – C83.39	Diffuse large B-cell lymphoma
C83.50 – C83.59	Lymphoblastic (diffuse) lymphoma
C83.70 – C83.79	Burkitt lymphoma
C83.80 – C83.89	Other non-follicular lymphoma
C83.90 – C83.99	Non-follicular (diffuse) lymphoma, unspecified
C85.10 – C85.19	Unspecified B-cell lymphoma
C85.20 – C85.29	Mediastinal (thymic) large B-cell lymphoma
C85.80 – C85.89	Other specified types of non-Hodgkin lymphoma
C88.4	Extranodal marginal zone B-cell lymphoma of mucosa-associated lymphoid tissue [MALT-lymphoma]
C91.10	Chronic lymphocytic leukemia of B-cell type not having achieved remission
C91.11	Chronic lymphocytic leukemia of B-cell type in remission
C91.12	Chronic lymphocytic leukemia of B-cell type in relapse
C91.40	Hairy cell leukemia not having achieved remission
C91.42	Hairy cell leukemia in relapse
D36.0	Benign neoplasm of lymph nodes
D47.Z1	Post-transplant lymphoproliferative disorder (PTLD)
D47.Z2	Castleman disease
N04.0 – N04.9	Nephritic syndrome
N05.0 – N05.9	Unspecified nephritic syndrome
R59.0 – R59.9	Enlarged lymph nodes, unspecified

## REIMBURSEMENT INFORMATION:

Refer to section entitled [POSITION STATEMENT](#).

## PROGRAM EXCEPTIONS:

**Federal Employee Program (FEP):** Follow FEP guidelines.

**State Account Organization (SAO):** Follow SAO guidelines.

**Medicare Part D:** BCBSF has delegated to Prime Therapeutics authority to make coverage determinations for the Medicare Part D services referenced in this guideline.

**Medicare Advantage:** No National Coverage Determination (NCD) and/or Local Coverage Determination (LCD) were found at the time of the last guideline review date.

## DEFINITIONS:

**Chronic lymphocytic leukemia (CLL):** an indolent (slow growing) cancer in which too many immature lymphocytes (white blood cells) are found mostly in the blood and bone marrow. Sometimes, in later stages of the disease, cancer cells are found in the lymph nodes and the disease is called small lymphocytic lymphoma.

## COMMITTEE APPROVAL:

This Medical Coverage Guideline (MCG) was approved by the Florida Blue Pharmacy Policy Committee on 07/12/23.

## GUIDELINE UPDATE INFORMATION:

03/15/14	New Medical Coverage Guideline.
01/01/15	Review and revision to guideline; consisting of annual HCPSC coding update
08/15/15	Review and revision to guideline; consisting of description, position statement, precautions, billing/coding information, related guidelines, and references.
11/01/15	Revision: ICD-9 Codes deleted.
08/15/16	Review and revision to guideline consisting of updating the description section, position statement, dosage/administration section, related guidelines, and references.
12/15/16	Revision to guideline consisting of updating the description section, position statement, and references based on updated NCCN guidelines for CLL/SLL
08/15/17	Review and revision to guideline consisting of updating the description, position statement, and references.
05/15/18	Revision to guideline consisting of updating the description section, position statement, and references based on updated NCCN guidelines for CLL/SLL.
08/15/18	Review and revision to guideline consisting of updating the description section, position statement, dosage/administration, precautions, billing/coding, and references.
03/15/19	Revision to guideline consisting of updating the description section, position statement, billing/coding, and references based on updated NCCN B-Cell Lymphoma guidelines and Imbruvica labeling.
08/15/19	Review and revision to guideline consisting of updating the description section, position statement, and references.
03/15/20	Revision to guideline consisting of updating the description section, position statement, related guidelines, and references based on updated NCCN guidelines.
08/15/20	Review and revision to guideline consisting of updating the position statement, precautions, related guidelines, and references.
08/15/21	Review and revision to guideline consisting of updating the position statement, precautions, related guidelines, and references.
08/15/22	Review and revision to guideline consisting of updating the description section, position statement, billing/coding, and references.
08/15/23	Review and revision to guideline consisting of updating the description section, position statement, precautions, billing/coding, and references. Added new indication of hairy cell leukemia. Updated the positioning of regimens for CLL/SLL.
