Subject: Fosnetupitant-Palonosetron (Akynzeo) IV

THIS MEDICAL COVERAGE GUIDELINE IS NOT AN AUTHORIZATION, CERTIFICATION, EXPLANATION OF BENEFITS, OR A GUARANTEE OF PAYMENT, NOR DOES IT SUBSTITUTE FOR OR CONSTITUTE MEDICAL ADVICE. ALL MEDICAL DECISIONS ARE SOLELY THE RESPONSIBILITY OF THE PATIENT AND PHYSICIAN. BENEFITS ARE DETERMINED BY THE GROUP CONTRACT, MEMBER BENEFIT BOOKLET, AND/OR INDIVIDUAL SUBSCRIBER CERTIFICATE IN EFFECT AT THE TIME SERVICES WERE RENDERED. THIS MEDICAL COVERAGE GUIDELINE APPLIES TO ALL LINES OF BUSINESS UNLESS OTHERWISE NOTED IN THE PROGRAM EXCEPTIONS SECTION.

DESCRIPTION:

Chemotherapy-induced nausea and vomiting (CINV) can significantly affect a patient's quality of life, leading to poor compliance with further chemotherapy. The severity and incidence of CINV are affected by factors such as the selected agent and dose of chemotherapy, schedule and route of administration, and patient specific factors (e.g., age, sex, prior chemotherapy, history of alcohol use).

Fosnetupitant/palonosetron (Akynzeo IV) is a combined neurokinin-1(NK-1) receptor antagonist and serotonin (5HT3) receptor antagonist that was FDA approved in April 2018 for the prevention of acute and delayed nausea and vomiting associated with initial and repeat courses of highly emetogenic cancer chemotherapy. Fosnetupitant/palonosetron was approved based on bioequivalence of the intravenous formulation with the oral form of netupitant/palonosetron (Akynzeo capsules). Fosnetupitant is a prodrug that is converted to netupitant by metabolic hydrolysis.

National Comprehensive Cancer Network (NCCN) Guidelines for Antiemesis recommend NK1 receptor antagonist containing regimens (e.g., aprepitant, fosaprepitant, rolapitant, or netupitant) for acute and delayed emesis prevention in combination with dexamethasone and a serotonin antagonist with or without lorazepam, histamine-2 blockers, or proton pump inhibitors before intravenous antineoplastic therapy with high or moderate emetic risk. The use of an NK1 receptor antagonist is also recommended in combination with olanzapine, dexamethasone, and a serotonin antagonist for high risk antineoplastic therapy or if emesis occurred during a previous cycle of antineoplastic therapy with a 3-drug regimen. NCCN specifically states that use of NK1 receptor antagonists are for the prevention of CINV, not treatment of CINV.

POSITION STATEMENT:

- I. Fosnetupitant/palonosetron injection (Akynzeo IV®) **meets the definition of medical necessity** when **ALL** of the following are met:

1. Use is for prevention of acute or delayed chemotherapy-induced nausea and vomiting associated with initial or repeat courses of chemotherapy
2. **ONE** of the following:
 - a. Chemotherapy has a moderate or high emetogenic potential (Table 1)
 - b. Chemotherapy has a low emetogenic potential (Table 1) and the member has an inadequate response to use of a serotonin antagonist (i.e., ondansetron, granisetron, or palonosetron) to prevent chemotherapy-induced nausea and vomiting[†]
3. Use is in combination with a corticosteroid (i.e., dexamethasone) * **OR** the member has a contraindication to corticosteroids
4. The member is not receiving an additional NK1 receptor antagonist (e.g., aprepitant, fosaprepitant, rolapitant, or netupitant/palonosetron)
5. The member is not receiving an additional serotonin antagonist for prevention of nausea and vomiting (e.g., palonosetron, subcutaneous granisetron)
6. The member had an inadequate response or intolerance to fosaprepitant used in combination with a serotonin antagonist (i.e., ondansetron, granisetron, or palonosetron)[†]
7. The dose does not exceed 235 mg fosnetupitant/0.25 mg palonosetron and is given prior to chemotherapy

Duration of approval: 1 year

***Note:** Given with or without olanzapine, lorazepam, histamine-2 receptor blocker or proton pump inhibitor

[†]Step therapy requirement does not apply if the member was previously approved by Florida Blue or a prior health plan.

DOSAGE/ADMINISTRATION:

THIS INFORMATION IS PROVIDED FOR INFORMATIONAL PURPOSES ONLY AND SHOULD NOT BE USED AS A SOURCE FOR MAKING PRESCRIBING OR OTHER MEDICAL DETERMINATIONS. PROVIDERS SHOULD REFER TO THE MANUFACTURER'S FULL PRESCRIBING INFORMATION FOR DOSAGE GUIDELINES AND OTHER INFORMATION RELATED TO THIS MEDICATION BEFORE MAKING ANY CLINICAL DECISIONS REGARDING ITS USAGE.

FDA-approved

Fosnetupitant/palonosetron for injection is indicated in combination with dexamethasone in adults for the prevention of acute and delayed nausea and vomiting associated with initial and repeat courses of highly emetogenic cancer chemotherapy. It has not been studied for the prevention of nausea and vomiting associated with anthracycline plus cyclophosphamide.

One reconstituted vial (235mg fosnetupitant/0.25mg palonosetron) is infused over 30 minutes starting 30 minutes prior to chemotherapy.

Dose Adjustments

Fosnetupitant/palonosetron for injection has not been studied in patients with severe renal impairment or severe hepatic impairment and use should be avoided.

Drug Availability

- 235 mg fosnetupitant/0.25 mg palonosetron in a single-dose vial as a solution or as a single-dose vial for reconstitution

PRECAUTIONS:

Contraindications – None

Precautions/Warnings

- **Hypersensitivity**– Hypersensitivity reactions, including anaphylaxis, have been reported in patients treated with palonosetron.
- **Serotonin syndrome**— Serotonin syndrome has occurred following the use of 5-HT3 receptor antagonists alone or in combination with other serotonergic drugs. Discontinue use and begin supportive treatment if serotonin syndrome develops.

BILLING/CODING INFORMATION:

The following codes may be used to describe:

HCPCS Coding

| | |
|-------|--|
| J1454 | Injection, fosnetupitant 235 mg and palonosetron 0.25 mg |
|-------|--|

ICD-10 Diagnosis Codes That Support Medical Necessity

| | |
|-----------------|---|
| R11.0 | Nausea |
| R11.10 – R11.12 | Vomiting, unspecified |
| R11.2 | Nausea with vomiting, unspecified |
| T45.1X5A | Adverse effect of antineoplastic and immunosuppressive drugs, initial encounter |
| T45.1X5D | Adverse effect of antineoplastic and immunosuppressive drugs, subsequent encounter |
| T45.1X5S | Adverse effect of antineoplastic and immunosuppressive drugs, sequela |
| T45.95XA | Adverse effect of unspecified primarily systemic and hematological agent, initial encounter |
| T50.905A | Adverse effect of unspecified drugs, medicaments and biological substances |
| Z51.11 | Encounter for antineoplastic chemotherapy |
| Z51.12 | Encounter for antineoplastic immunotherapy |

REIMBURSEMENT INFORMATION:

Refer to section entitled [POSITION STATEMENT](#).

PROGRAM EXCEPTIONS:

Federal Employee Program (FEP): Follow FEP guidelines.

State Account Organization (SAO): Follow SAO guidelines.

Medicare Part D: BCBSF has delegated to Prime Therapeutics authority to make coverage determinations for the Medicare Part D services referenced in this guideline.

Medicare Advantage: No National Coverage Determination (NCD) and/or Local Coverage Determination (LCD) were found at the time of the guideline creation.

DEFINITIONS:

Acute chemotherapy-induced nausea and vomiting – nausea and/or vomiting that occurs within a few minutes to several hours after drug administration and commonly resolves within the first 24 hours.

Delayed chemotherapy-induced nausea and vomiting – nausea and/or vomiting that occurs 24 hours after drug administration.
