Subject: Bio-Engineered Skin and Soft Tissue Substitutes; Amniotic Membrane and Amniotic Fluid

THIS MEDICAL COVERAGE GUIDELINE IS NOT AN AUTHORIZATION, CERTIFICATION, EXPLANATION OF BENEFITS, OR A GUARANTEE OF PAYMENT, NOR DOES IT SUBSTITUTE FOR OR CONSTITUTE MEDICAL ADVICE. ALL MEDICAL DECISIONS ARE SOLELY THE RESPONSIBILITY OF THE PATIENT AND PHYSICIAN. BENEFITS ARE DETERMINED BY THE GROUP CONTRACT, MEMBER BENEFIT BOOKLET, AND/OR INDIVIDUAL SUBSCRIBER CERTIFICATE IN EFFECT AT THE TIME SERVICES WERE RENDERED. THIS MEDICAL COVERAGE GUIDELINE APPLIES TO ALL LINES OF BUSINESS UNLESS OTHERWISE NOTED IN THE PROGRAM EXCEPTIONS SECTION.

DESCRIPTION:

Bio-engineered skin and soft tissue substitutes may be derived from human tissue (autologous or allogeneic), non-human tissue (xenographic), synthetic materials, or a composite of these materials. Bioengineered skin and soft tissue substitutes are being evaluated for a variety of conditions, including breast reconstruction and healing lower-extremity ulcers and severe burns. Acellular dermal matrix (ADM) products are also being evaluated for soft tissue repair. Bioengineered skin and soft tissue substitutes may be either acellular or cellular. Acellular products (eg, dermis with cellular material removed) contain a matrix or scaffold composed of materials such as collagen, hyaluronic acid, and fibronectin. Acellular dermal matrix (ADM) products can differ in a number of ways, including as species source (human, bovine, porcine), tissue source (eg dermis, pericardium, intestinal mucosa), additives (eg antibiotics, surfactants), hydration (wet, freeze-dried), and required preparation (multiple rinses, rehydration). Cellular products contain living cells such as fibroblasts and keratinocytes within a matrix. The cells contained within the matrix may be autologous, allogeneic, or derived from other species (eg, bovine, porcine). Skin substitutes may also be composed of dermal cells, epidermal cells, or a combination of dermal and epidermal cells, and may provide growth factors to stimulate healing. Bioengineered skin substitutes can be used as either temporary or permanent wound coverings.

Several commercially available forms of human amniotic membrane (HAM) and amniotic fluid can be administered by patches, topical application, or injection. Amniotic membrane and amniotic fluid are being evaluated for the treatment of various conditions, including chronic full thickness diabetic lower extremity ulcers, venous ulcers, knee osteoarthritis, plantar fasciitis, and ophthalmic conditions. Human amniotic membrane (HAM) consists of 2 conjoined layers, the amnion, and chorion, and forms the innermost lining of the amniotic sac or placenta. When prepared for use as an allograft, the membrane

is harvested immediately after birth, cleaned, sterilized, and either cryopreserved or dehydrated. Many products available using amnion, chorion, amniotic fluid, and umbilical cord are being studied for the treatment of a variety of conditions, including chronic full-thickness diabetic lower-extremity ulcers, venous ulcers, knee osteoarthritis, plantar fasciitis, and ophthalmic conditions. The products are formulated either as patches, which can be applied as wound covers, or as suspensions or particulates, or connective tissue extractions, which can be injected or applied topically. Injection of amniotic fluid or amniotic fluid-derived cells is currently being evaluated for the treatment of osteoarthritis and plantar fasciitis.

Summary and Analysis of Evidence: Skin and Soft Tissue Substitutes- Patients who are undergoing breast reconstruction who receive allogeneic acellular dermal matrix (ADM) products, the evidence includes randomized controlled trials (RCTs) and systematic reviews. A systematic review found no difference in overall complication rates with ADM allograft compared with standard procedures for breast reconstruction. Reconstructions with ADM have been reported to have higher seroma, infection, and necrosis rates than reconstructions without ADM. However, capsular contracture and malposition of implants may be reduced. In cases where there is limited tissue coverage, the available evidence may inform patient decision making about reconstruction options. The evidence is sufficient to determine that the technology results in an improvement in the net health outcome. Patients undergoing tendon repair who receive GraftJacket, the evidence includes an RCT. The RCT identified found improved outcomes with the GraftJacket ADM allograft for rotator cuff repair. Although these results were positive, additional studies with a larger number of patients is needed to evaluate the consistency of the effect. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Diabetic lower-extremity ulcers for patients who receive AlloPatch, Apligraf, Dermagraft, Integra, mVASC, or TheraSkin, the evidence includes RCTs. RCTs reporting complete wound healing outcomes with at least 12 weeks of follow-up have demonstrated the efficacy of AlloPatch (reticular ADM), Apligraf and Dermagraft (living cell therapy), Integra (biosynthetic), mVASC, and TheraSkin over the standard of care (SOC). The evidence is sufficient to determine that the technology results in an improvement in the net health outcome. Patients with diabetic lower-extremity ulcers who receive ADM products other than AlloPatch, Apligraf, Dermagraft, or Integra, mVASC, or TheraSkin, the evidence includes RCTs. Results from a multicenter RCT showed some benefit of DermACELL that was primarily for the subgroup of patients who only required a single application of the ADM. Studies are needed to further define the population who might benefit from this treatment. Additional study with a larger number of subjects is needed to evaluate the effect of GraftJacket, DermACELL, Cytal, PriMatrix, and Oasis Wound Matrix, compared with current SOC or other advanced wound therapies. An RCT of Omega3 Wound (Kerecis) has been published and 2 larger RCTs are registered and reported as completed but have not been published. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Patients who have lower-extremity ulcers due to venous insufficiency who receive Apligraf or Oasis Wound Matrix, the evidence includes RCTs. RCTs have demonstrated the efficacy of Apligraf living cell therapy and xenogeneic Oasis Wound Matrix over the SOC. The evidence is sufficient to determine that the technology results in an improvement in the net health outcome. Lower-extremity ulcers due to venous insufficiency treated with bioengineered skin substitutes other than Apligraf or Oasis Wound Matrix, the evidence includes RCTs. In a moderately large RCT, Dermagraft was not shown to be more effective than controls for the primary or secondary endpoints in the entire population and was only slightly more effective than controls (an 8% to 15% increase in healing) in subgroups of patients with ulcer durations of 12 months or less or size of 10 cm or

less. Additional studies with a larger number of subjects is needed to evaluate the effect of the xenogeneic PriMatrix skin substitute versus the current SOC. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Patients who have dystrophic epidermolysis bullosa who receive OrCel, the evidence includes a case series. OrCel was approved under a humanitarian drug exemption for use in patients with dystrophic epidermolysis bullosa undergoing hand reconstruction surgery, to close and heal wounds created by the surgery, including those at donor sites. Outcomes have been reported in a small series (eg, 5 patients). The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Deep dermal burns treated with bioengineered skin substitutes (ie, Epicel, Integra Dermal Regeneration Template), the evidence includes RCTs. Overall, few skin substitutes have been approved, and the evidence is limited for each product. Epicel (living cell therapy) has received FDA approval under a humanitarian device exemption for the treatment of deep dermal or full-thickness burns comprising a total body surface area of 30% or more. Comparative studies have demonstrated improved outcomes for biosynthetic skin substitute Integra Dermal Regeneration Template for the treatment of burns. The evidence is sufficient to determine that the technology results in an improvement in the net health outcome. Amniotic Membrane and Amniotic Fluid- Patients with non-healing diabetic lower-extremity ulcers who receive a patch formulation of HAM or placental membrane (ie, Affinity, AmnioBand Membrane, AmnioExcel, Biovance, EpiCord, EpiFix, Grafix), the evidence includes randomized controlled trials (RCTs). The RCTs evaluating amniotic and placental membrane products for the treatment of non-healing (<20% healing with ≥ 2 weeks of standard care) diabetic lower-extremity ulcers have compared HAM with standard care or with an established advanced wound care product. These trials used wound closure as the primary outcome measure, and some used power analysis, blinded assessment of wound healing, and intention-to-treat analysis. For the HAM products that have been sufficiently evaluated (ie, Affinity, AmnioBand Membrane, Biovance, EpiCord, EpiFix, Grafix), results have shown improved outcomes compared with standard care, and outcomes that are at least as good as an established advanced wound care product. Improved health outcomes in the RCTs are supported by multicenter registries. The evidence is sufficient to determine that the technology results in an improvement in the net health outcome. Lower-extremity ulcers due to venous insufficiency treated with a patch formulation of HAM, the evidence includes 3 RCTs. The published evidence on HAM for the treatment of venous leg ulcers includes 2 multicenter RCTs with EpiFix and 1 multicenter RCT with Amnioband. One RCT reported a larger percent wound closure at 4 weeks, but the percentage of patients with complete wound closure at 4 weeks did not differ between EpiFix and the standard of care. A second RCT evaluated complete wound closure at 12 weeks after weekly application of EpiFix or standard dressings with compression, but interpretation is limited by methodologic concerns. A third RCT demonstrated significantly greater blinded assessor-confirmed rates of complete wound closure at 12 weeks after weekly or twice-weekly application of AmnioBand Membrane with compression bandaging compared with compression bandaging alone. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Patientw with knee osteoarthritis who receive an injection of suspension or particulate formulation of HAM or amniotic fluid, the evidence includes a feasibility study. The pilot study assessed the feasibility of a larger RCT evaluating HAM injection. Additional trials, which will have a larger sample size and longer follow-up, are needed to permit conclusions on the effect of this treatment. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome. Patients with plantar fasciitis who receive an injection of amniotic membrane, the includes preliminary studies and a larger (N=145) patient-blinded comparison of

micronized injectable-HAM and placebo control. Injection of micronized amniotic membrane resulted in greater improvements in the visual analog score for pain and the Foot Functional Index compared to placebo controls. The primary limitation of the study is that this is an interim report with 12-month results pending. The evidence is insufficient to determine that the technology results in an improvement in the net health outcome.

POSITION STATEMENT:

Note: This guideline does not address the use of meshes or patches of non-biologic origin used for standard repair procedures such as hernia repairs.

Bio-Engineered Skin and Soft Tissue Substitutes

Breast reconstructive surgery using allogeneic acellular dermal matrix products* (i.e. AlloDerm[®], AlloMend[®], Cortiva[®] (AlloMax[™]), DermACELL[™], DermaMatrix[™], FlexHD[®], FlexHD[®] Pliable[™], GraftJacket[®]) **meets the definition of medical necessity** for **ONE** of the following indications:

- when there is insufficient tissue expander or implant coverage by the pectoralis major muscle and additional coverage is required, **OR**
- when there is viable but compromised or thin post-mastectomy skin flaps that are at risk of dehiscence or necrosis, **OR**
- the inframammary fold and lateral mammary folds have been undermined during mastectomy and re-establishment of these landmarks is needed.

Treatment of chronic, non-infected, full-thickness diabetic lower extremity ulcers using the following tissue-engineered skin substitutes **meets the definition of medical necessity**:

- AlloPatch^{®*}
- Apligraf^{f®**}
- Dermagraft^{®**}
- Integra[®] Omnigraft Dermal Regeneration Matrix (also known as Omnigraft)
- Integra[™] Flowable Wound Matrix
- Primatrix[®]
- Primatrix[®] Dermal Repair Scaffold
- mVASC[®]
- TheraSkin[®].

Treatment of chronic, noninfected, partial- or full-thickness lower extremity skin ulcers due to venous insufficiency, which have not adequately responded following a one-month period of conventional ulcer therapy, using the following tissue-engineered skin substitutes **meets the definition of medical necessity**:

- Apligraf^{f®**}
- Oasis[™] Wound Matrix^{***}.

Treatment of dystrophic epidermolysis bullosa using the following tissue-engineered skin substitutes **meets the definition of medical necessity:**

- OrCel™ (for the treatment of mitten-hand deformity when standard wound therapy has failed and when provided in accordance with the Humanitarian Device Exemption (HDE) specifications of the FDA)****.

Treatment of second- and third-degree burns using the following tissue-engineered skin substitutes **meets the definition of medical necessity:**

- Epicel® (for the treatment of deep dermal or full-thickness burns comprising a total body surface area of greater than or equal to 30% when provided in accordance with the HDE specifications of the FDA)****
- Integra® Dermal Regeneration Template™**
- Primatrix® Dermal Repair Scaffold.

* Banked Human Tissue.

** FDA premarket approval.

*** FDA 510(k) clearance.

**** FDA-approved under an HDE.

All other uses of the bio-engineered skin and soft tissue substitutes listed above **do not meet the definition of medical necessity.**

Amniotic Membrane and Amniotic Fluid

Treatment of nonhealing diabetic lower-extremity ulcers using the following human amniotic membrane products **meets the definition of medical necessity:**

- Affinity®
- AmnioBand® Membrane
- AmnioExcel®
- Biovance®
- Epicord®
- Epifix®
- Grafix™.

All other indications not listed above are considered **experimental or investigational**, including but not limited to treatment of lower extremity ulcers due to venous insufficiency and repair following Mohs micrographic surgery. The evidence is insufficient to determine the effects of the technology on health outcomes.

The following is considered **experimental or investigational** for all indications, including but not limited to treatment of osteoarthritis and plantar fasciitis:

- Injection of micronized or particulated human amniotic membrane
- Injection of human amniotic fluid.

The evidence is insufficient to determine the effects of the technology on health outcomes.

All other bio-engineered skin substitutes, soft tissue substitutes, amniotic membranes and amniotic fluids are considered **experimental or Investigational**, including, but not limited to:

Q4215	Axolotl ambient or axolotl cryo, 0.1 mg (Investigational)
Q4216	Artacent cord, per square centimeter (Investigational)
Q4217	Woundfix, BioWound, Woundfix Plus, BioWound Plus, Woundfix Xplus or BioWound Xplus, per square centimeter (Investigational)

Q4218	Surgicord, per square centimeter (Investigational)
Q4219	Surgigraft-dual, per square centimeter (Investigational)
Q4220	BellaCell HD or Surederm, per square centimeter (Investigational)
Q4221	Amniowrap2, per square centimeter (Investigational)
Q4222	Progenamatrix, per square centimeter (Investigational)
Q4226	MyOwn skin, includes harvesting and preparation procedures, per square centimeter (Investigational)
Q4224	Human health factor 10 amniotic patch (hhf10-p), per square centimeter (Investigational)
Q4225	Amniobind or dermabind tl, per square centimeter (Investigational)
Q4227	Amniocore, per square centimeter (Investigational)
Q4229	Cogenex amniotic membrane, per square centimeter (Investigational)
Q4230	Cogenex flowable amnion, per 0.5 cc (Investigational)
Q4231	Corplex p, per cc (Investigational)
Q4232	Corplex, per square centimeter (Investigational)
Q4233	Surfactor or nudyn, per 0.5 cc (Investigational)
Q4234	Xcellerate, per square centimeter (Investigational)
Q4235	Amniorepair or altiPLY, per square centimeter (Investigational)
Q4236	Carepatch, per square centimeter (Investigational)
Q4237	Cryo-cord, per square centimeter (Investigational)
Q4238	Derm-maxx, per square centimeter (Investigational)
Q4239	Amnio-maxx or amnio-maxx lite, per square centimeter (Investigational)
Q4240	Corecyte, for topical use only, per 0.5 cc (Investigational)
Q4241	Polycyte, for topical use only, per 0.5 cc (Investigational)
Q4242	Amniocyte plus, per 0.5 cc (Investigational)
Q4245	Amniotext, per cc (Investigational)
Q4246	Coretext or protext, per cc (Investigational)
Q4247	Amniotext patch, per square centimeter (Investigational)
Q4248	Dermacyte amniotic membrane allograft, per square centimeter (Investigational)
Q4249	AmniPLY, for topical use only, per square centimeter (Investigational)
Q4250	Amnioamp-mp, per square centimeter (Investigational)
Q4251	Vim, per square centimeter (Investigational)
Q4252	Vendaje, per square centimeter (Investigational)
Q4253	Zenith amniotic membrane, per square centimeter (Investigational)
Q4254	Novafix dl, per square centimeter (Investigational)
Q4255	Reguard, for topical use only, per square centimeter (Investigational)
Q4256	Mlg-complete, per square centimeter (Investigational)
Q4257	Relese, per square centimeter (Investigational)
Q4258	Enverse, per square centimeter (Investigational)
Q4259	Celera dual layer or celera dual membrane, per square centimeter (Investigational)
Q4260	Signature apatch, per square centimeter (Investigational)

Q4261	Tag, per square centimeter (Investigational)
Q4262	Dual layer impax membrane, per square centimeter (Investigational)
Q4263	Surgraft tl, per square centimeter (Investigational)
Q4264	Cocoon membrane, per square centimeter (Investigational)
Q4265	Neostim tl, per square centimeter (Investigational)
Q4266	Neostim membrane, per square centimeter (Investigational)
Q4267	Neostim dl, per square centimeter (Investigational)
Q4268	Surgraft ft, per square centimeter (Investigational)
Q4269	Surgraft xt, per square centimeter (Investigational)
Q4270	Complete sl, per square centimeter (Investigational)
Q4271	Complete ft, per square centimeter (Investigational)
Q4272	Esano a, per square centimeter (Investigational)
Q4273	Esano aaa, per square centimeter (Investigational)
Q4274	Esano ac, per square centimeter (Investigational)
Q4275	Esano aca, per square centimeter (Investigational)
Q4276	Orion, per square centimeter (Investigational)
Q4278	Epieffect, per square centimeter (Investigational)
Q4279	Vendaje ac, per square centimeter (Investigational)
Q4280	Xcell amnio matrix, per square centimeter (Investigational)
Q4281	Barrera sl or barrera dl, per square centimeter (Investigational)
Q4282	Cygnus dual, per square centimeter (Investigational)
Q4283	Biovance tri-layer or biovance 3l, per square centimeter
Q4284	Dermabind sl, per square centimeter (Investigational)
Q4285	Nudyn dl or nudyn dl mesh, per square centimeter (Investigational)
Q4286	Nudyn sl or nudyn slw, per square centimeter (Investigational)
Q4287	Dermabind dl, per square centimeter (Investigational)
Q4288	Dermabind ch, per square centimeter (Investigational)
Q4289	Revoshield + amniotic barrier, per square centimeter (Investigational)
Q4290	Membrane wrap-hydro, per square centimeter (Investigational)
Q4291	Lamellas xt, per square centimeter (Investigational)
Q4292	Lamellas, per square centimeter (Investigational)
Q4293	Acesso dl, per square centimeter (Investigational)
Q4294	Amnio quad-core, per square centimeter (Investigational)
Q4295	Amnio tri-core amniotic, per square centimeter (Investigational)
Q4296	Rebound matrix, per square centimeter (Investigational)
Q4297	Emerge matrix, per square centimeter (Investigational)
Q4298	Amnicore pro, per square centimeter (Investigational)
Q4299	Amnicore pro+, per square centimeter (Investigational)
Q4300	Acesso tl, per square centimeter (Investigational)
Q4301	Activate matrix, per square centimeter (Investigational)
Q4302	Complete aca, per square centimeter (Investigational)
Q4303	Complete aa, per square centimeter (Investigational)
Q4304	Grafix plus, per square centimeter

Q4305	American amnion ac tri-layer, per square centimeter (Investigational)
Q4306	American amnion ac, per square centimeter (Investigational)
Q4307	American amnion, per square centimeter (Investigational)
Q4308	Sanopellis, per square centimeter (Investigational)
Q4309	Via matrix, per square centimeter (Investigational)
Q4310	Procenta, per 100 mg (Investigational)
Q4311	Acesso, per square centimeter (Investigational)
Q4312	Acesso ac, per square centimeter (Investigational)
Q4313	Dermabind fm, per square centimeter (Investigational)
Q4314	Reeva ft, per square centimeter (Investigational)
Q4315	Regenlink amniotic membrane allograft, per square centimeter (Investigational)
Q4316	Amchoplast, per square centimeter (Investigational)
Q4317	Vitograft, per square centimeter (Investigational)
Q4318	E-graft, per square centimeter (Investigational)
Q4319	Sanograft, per square centimeter (Investigational)
Q4320	Pellograft, per square centimeter (Investigational)
Q4321	Renograft, per square centimeter (Investigational)
Q4322	Caregraft, per square centimeter (Investigational)
Q4323	Alloply, per square centimeter (Investigational)
Q4324	Amniotx, per square centimeter (Investigational)
Q4325	Acapatch, per square centimeter (Investigational)
Q4326	Woundplus, per square centimeter (Investigational)
Q4327	Duoamnion, per square centimeter (Investigational)
Q4328	Most, per square centimeter (Investigational)
Q4329	Singlay, per square centimeter (Investigational)
Q4330	Total, per square centimeter (Investigational)
Q4331	Axolotl graft, per square centimeter (Investigational)
Q4332	Axolotl dualgraft, per square centimeter (Investigational)
Q4333	Ardeograft, per square centimeter (Investigational)

ICD-10 Diagnosis Codes That Support Medical Necessity:

C50.011 – C50.019 C50.111 – C50.119 C50.211 – C50.219 C50.311 – C50.319 C50.411 – C50.519 C50.611 – C50.619 C50.811 – C50.819 C50.911 – C50.919	Malignant neoplasm of breast
D05.00 – D05.92	Carcinoma in situ of breast
E08.621	Diabetes mellitus due to underlying condition with foot ulcer
E08.622	Diabetes mellitus due to underlying condition with other skin ulcer
E09.621	Drug or chemical induced diabetes mellitus with foot ulcer
E09.622	Drug or chemical induced diabetes mellitus with other skin ulcer
E10.621	Type 1 diabetes mellitus with foot ulcer

E10.622	Type 1 diabetes mellitus with other skin ulcer
E11.621	Type 2 diabetes mellitus with foot ulcer
E11.622	Type 2 diabetes mellitus with other skin ulcer
E13.621	Other specified diabetes mellitus with foot ulcer
E13.622	Other specified diabetes mellitus with other skin ulcer
I83.001 – I83.029	Varicose veins of lower extremities with ulcer
I83.201 – I83.229	Varicose veins of lower extremities with both ulcer and inflammation
Q81.2	Epidermolysis bullosa dystrophica
T20.20xA – T20.39xS T20.60xA – T20.79xS	Burn and corrosion of head, face and neck
T21.20xA – T21.39xS T21.60xA – T21.79xS	Burn and corrosion of trunk
T22.20xA – T22.399S T22.60xA – T22.799S	Burn and corrosion of shoulder and upper limb except wrist and hand
T23.201A – T23.399S T23.601A – T23.799S	Burn and corrosion of wrist and hand
T24.201A – T24.399S T24.601A – T24.799S	Burn and corrosion of lower limb, except ankle and foot
T25.211A – T25.399S T25.611A – T25.799S	Burn and corrosion of ankle and foot
T30.0 – T32.99	Burns classified according to extent of body surface involvement
T34.011A – T34.99XS	Frostbite with tissue necrosis

Application Codes: (See reimbursement section below)

15271	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area
15272	Application of skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)
15273	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children
15274	Application of skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)
15275	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area
15276	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area

	up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (List separately in addition to code for primary procedure)
15277	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children
15278	Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (List separately in addition to code for primary procedure)
C5271	Application of low cost skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area
C5272	Application of low cost skin substitute graft to trunk, arms, legs, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (list separately in addition to code for primary procedure)
C5273	Application of low cost skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children
C5274	Application of low cost skin substitute graft to trunk, arms, legs, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (list separately in addition to code for primary procedure)
C5275	Application of low cost skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area
C5276	Application of low cost skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; each additional 25 sq cm wound surface area, or part thereof (list separately in addition to code for primary procedure)
C5277	Application of low cost skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1% of body area of infants and children
C5278	Application of low cost skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; each additional 100 sq cm wound surface area, or part thereof, or each additional 1% of body area of infants and children, or part thereof (list separately in addition to code for primary procedure)

REIMBURSEMENT INFORMATION:

Apligraf® is limited to five (5) applications per ulcer. The safety and the effectiveness of Apligraf have not been established for patients receiving greater than 5 applications.

Dermagraft® is limited to eight (8) applications per treatment site over a twelve (12) week period. Dermagraft has not been studied in patients receiving greater than 8 device applications.

OrCel™ is limited to a single, one-time application per donor site. No more than eight (8) pieces should be used per donor site. The safety and effectiveness of OrCel has not been evaluated in burn patients with split thickness donor sites larger than 288cm (8 pieces of OrCel).

Safety and effectiveness of **re-treatment** of a single wound using Apligraf®, Dermagraft® or OrCel™ has not been established and is considered **experimental or Investigational**.

Application codes (15271-15278, C5271-C5278) must be submitted with product codes.

PROGRAM EXCEPTIONS:

Federal Employee Program (FEP): Follow FEP guidelines.

State Account Organization (SAO): Follow SAO guidelines.

Medicare Advantage products:

The following National Coverage Determination (NCD) was reviewed on the last guideline reviewed date: Porcine skin and Gradient Pressure Dressing (270.5) located at cms.gov.

The following were reviewed on the last guideline reviewed date: Local Coverage Determination (LCD) Application of Skin Substitute Grafts for Treatment of DFU and VLU of Lower Extremities (L36377); and Local Coverage Article Billing and Coding: Application of Skin Substitute Grafts for Treatment of DFU and VLU of Lower Extremities A57680 located at fcso.com.

DEFINITIONS:

Nonhealing- less than a 20% decrease in wound area with standard wound care for at least 2 weeks.

RELATED GUIDELINES:

[Amniotic Membrane and Limbal Stem Cell Transplantation for the Treatment of Ocular Conditions, 02-65000-19](#)

OTHER:

None.

COMMITTEE APPROVAL:

This Medical Coverage Guideline (MCG) was approved by the Florida Blue Medical Policy and Coverage Committee on 04/25/24.

GUIDELINE UPDATE INFORMATION:

01/01/01	New Medical Coverage Guideline.
01/01/02	Annual HCPCS coding update.
01/01/03	Annual HCPCS coding update.
02/15/03	Annual Review.
06/15/04	Unscheduled review and revision to guideline; consisting of updated references, deleted J7350 and changed name of MCG from Apligraf (Graftskin) to Human Skin Equivalent Grafts.
01/01/05	Annual HCPCS coding update: consisting of addition of J7343 and J7344 and deletion of Q0182 and Q0183.
01/01/06	Annual HCPCS coding update: added 15000, 15340, 15341, 15360, 15361, 15365, and 15366. Deleted: 15342, 15343, J7343. Revised: J7340, J7342, and J7344.
08/15/06	Biennial review; new information added for Integra, TransCyte, allograft, OrCel, xenograft, AlloDerm; revision to code information; code J7343 added.
01/01/07	Annual HCPCS coding update: added J7345, J7346; deleted 15000 – 15400 & changed to 15002 – 15005 to describe codes used for graft site preparation & graft application.
03/15/07	Revision to guideline; consisting of addition of OASIS Wound Matrix (J7341), revision to criteria for Apligraf (J7340), revision to code information for J7344 and J7343, updated references.
06/15/07	Reformatted guideline.
08/15/07	Review, coverage statements maintained, references updated.
01/01/08	Annual HCPCS coding update: deleted J7345; added J7347, J7348, J7349.

01/01/09	Annual HCPCS coding update: added HCPCS codes Q4100 – Q4114; updated ICD-9 codes 707.10 – 707.19 & 707.8; and deleted HCPCS codes J7340-J7349.
07/01/09	Biennial review: description section, Alloderm position statement, coding and references updated. HCPCS 3 rd quarter coding update: added new codes Q4115 and Q4116.
10/15/10	Revision; related ICD-10 codes added.
01/01/11	Annual HCPCS coding update. Added Q4117 – Q4121; revised Q4101 – Q4116; deleted Q4109.
07/15/11	Scheduled review; position statements maintained, coding section and references updated.
01/01/12	Annual HCPCS coding update; added HCPCS codes Q4122-Q4130; CPT coding section updated.
07/15/12	Annual review; position statements, billing/coding information, description section, Medicare program exception, and references updated; formatting changes.
01/01/13	Annual HCPCS update; added Q4131-Q4136; revised Q4119, Q4126, & Q4128. Experimental list updated; formatting changes.
07/15/13	Annual review; description section, position statement, and references updated; formatting changes.
01/01/14	Annual HCPCS update. Added codes Q4137-Q4149. Position statement updated; formatting changes.
03/15/14	Annual review; position statements, Coding, Description, and references updated; formatting changes.
06/15/14	Revision; references updated.
01/01/15	Annual HCPCS/CPT update. Added codes Q4150-Q4160; revised codes Q4119 & Q4147.
03/15/15	Annual review; description and position statement section updated; coding and references updated; formatting changes.
10/01/15	Revision; ICD9 and ICD10 coding sections updated.
11/01/15	Revision: ICD-9 Codes deleted.
01/01/16	Annual HCPCS/CPT update; codes Q4161-Q4165 added; code Q4153 revised.
08/15/16	Revision; policy title, description section, position statement section, coding, and references updated; formatting changes.
10/01/16	Revision; formatting changes. Investigational product list updated.
11/15/16	Revision; coding section updated.
01/01/17	Annual CPT/HCPCS update. Added Q4166-Q4175; revised Q4105 & Q4131; deleted Q4119, Q4120, Q4129.
03/15/17	Revision; Position statements including treatment of diabetic ulcers, amniotic membrane, and investigational product list updated; Code Q4151, program exception, and references updated.
04/15/17	Revision; code C9349 deleted.
08/15/17	Revision; Integra Omnigraft deleted from investigational product list and added to bullet for Integra® Dermal Regeneration Template.
01/01/18	Annual CPT/HCPCS update. Added codes Q4176-Q4182; revised codes Q4132, Q4133, Q4148, Q4156, Q4158, Q4162, Q4163.
04/15/18	Revision; description, position statements, coding, and references updated.

01/01/19	Annual CPT/HCPCS coding update. Added codes Q4183-Q4204; revised codes Q4133 & Q4137; deleted codes Q4131 & Q4172.
04/15/19	Review; Investigational product list and references updated.
07/01/19	Revision; Investigational product list updated.
10/01/19	Quarterly CPT/HCPCS coding update. Added codes Q4205-Q4226; revised codes Q4122, Q4165, Q4184.
04/15/20	Review; position statements and references updated.
07/01/20	Quarterly CPT/HCPCS coding update. Added codes Q4227-Q4248; revised code Q4176.
08/15/20	Revision; coding section updated.
10/01/20	Quarterly CPT/HCPCS coding update. Added codes Q4249, Q4250, Q4254, Q4255.
04/15/21	Review; Position statements, investigational product list, coding and references updated.
05/21/21	Revision; investigational product list updated.
10/01/21	Quarterly CPT/HCPCS coding update. Codes Q4251-Q4253 added; codes Q4228 & Q4236 deleted.
01/01/22	Annual CPT/HCPCS coding update. Codes A2001-A2010, Q4199 added.
01/05/22	Revision; code A2003 deleted.
04/01/22	Review: Amniotic membrane position statement updated and references updated. Quarterly CPT/HCPCS coding update. Codes A2011-A2013, A4100, Q4224, Q4225, Q4256-Q4258 added.
07/01/22	Quarterly CPT/HCPCS coding update. Codes Q4259-Q4261 added; code A2004 revised.
10/01/22	Quarterly CPT/HCPCS coding update. Codes A2014-A2018 added; code Q4128 revised.
01/01/23	Annual CPT/HCPCS coding update. Codes Q4236, Q4262-Q4264 added.
04/01/23	Quarterly CPT/HCPCS coding update. Codes A2019-A2021, Q4265-Q4271 added.
07/01/23	Quarterly CPT/HCPCS coding update. Codes Q4272-Q4284 added.
10/01/23	Review: Investigational product list, coding, and references updated. Quarterly CPT/HCPCS coding update. Codes A2022-A2025, Q4285, Q4286 added.
01/01/24	Annual CPT/HCPCS coding update. Codes Q4279, Q4287-Q4304 added; code Q4225 revised.
04/01/24	Quarterly CPT/HCPCS coding update. Codes A2026, Q4305-Q4310; deleted Q4244.
05/15/24	Review: Position statements, description, coding, reimbursement, and references updated.
